# Sinan Şamil Köylü

**Software Engineer**

+90 553 886 1486 — koylusinansamil@gmail.com — Sinan Şamil Köylü — sinansamiil — Kayseri, Türkiye

## About Me

As a passionate Software Engineering student, I strive to develop innovative, reliable, and user-centric technological solutions. My technical background encompasses full-stack web development, safety-critical embedded systems for UAVs, and electric vehicle software architectures. I build scalable Next.js e-commerce platforms, optimize smart home management systems, and tackle cybersecurity challenges in CTF competitions. I view coding not just as a career path, but also as a fundamental hobby that fuels my continuous learning. When I am away from the keyboard, I enjoy traveling to explore new horizons and swimming. My goal is to continuously learn, collaborate with productive teams, and create software that makes a tangible impact.

## Education

**Aksaray University** **09/2024 – Present**
*B.S. in Software Engineering, Faculty of Engineering – 3.09* *Aksaray, Türkiye.*

**Istanbul University** **09/2025 – Present**
*B.S. in Management Information Systems, Open Education Faculty – 3.23* *Istanbul, Türkiye.*

## Work Experience

**Software Persona (TNC Group)** **14/09/2026 – 19/10/2026**
*Software Professional Development Program Participant* *Remote*
- Enhanced my sector-specific competencies in modern software development standards by participating in online training and project studies within the Software Professional Development Program.

**Bellona** **13/07/2026 – Present**
*Intern Software Engineer* *Kayseri, Türkiye.*
- Actively contributing to the digitalization of production and management processes within the Information Technologies department. Participating in technical implementations and business workflows at one of the leading companies in the furniture industry.

**KGK Mühendislik** **01/06/2025 – 01/08/2025**
*Intern Software Engineer* *Kayseri, Türkiye.*
- Actively participated in the software development lifecycle, focusing on debugging, feature implementation, and writing clean code. Collaborated effectively with the team on code reviews and project architecture.

**Bionluk** **01/09/2024 – Present**
*Freelancer* *Remote*
- Produced custom solutions tailored to client requirements in graphic design and software development fields through the platform, delivering end-to-end projects.

**BS Reklam** **01/06/2020 – Present**
*Graphic Design and Sales Marketing* *Kayseri, Türkiye.*
- Managed the end-to-end design and print production cycle to deliver high-quality outputs. Contributed to sales targets by providing tailored marketing and design solutions to clients.

## Volunteer Experience

**Türkiye Teknoloji Takımı Foundation (T3 Foundation)** **24/04/2026 – Present**
*Project Advisor* *Aksaray, Türkiye.*
- Mentored student teams, providing technical guidance and strategic support for their technology-driven projects.

**Türkiye Teknoloji Takımı Foundation (T3 Foundation)** **12/01/2026 – Present**
*"Sen Geleceksin" Scholarship Student* *Aksaray, Türkiye.*
- Contributed to the National Technology Initiative by participating in task-based projects and the organization of TEKNOFEST. Engaged in specialized leadership and project management training.

**Siber Vatan Program** **01/01/2026 – Present**
*Cyber Security Trainee* *Aksaray, Türkiye.*
- Developed practical cybersecurity skills in network forensics, reverse engineering, and cryptography. Applied theoretical knowledge to real-world scenarios by actively participating in CTF challenges.

**Sanayi ve Teknoloji Community** **20/10/2025 – 08/08/2026**
*Board Member* *Aksaray, Türkiye.*
- Organized technical summits, panels, and workshops to enhance the visibility of the community affiliated with the Provincial Directorate. Established strong collaborations with university and industry partners.

**Gürman İnovasyon** **20/10/2025 – Present**
*Software Engineer* *Aksaray, Türkiye.*
- Drove the software development for electric vehicle systems, including VCUs, BMS, and driver interfaces. Tackled complex challenges in system optimization and real-time diagnostics.

**Asena UAV Team** **01/10/2025 – Present**
*Software Engineer* *Aksaray, Türkiye.*
- Developed safety-critical embedded software and flight control systems for UAVs. Executed real-time debugging and sensor integration to ensure mission success and reliability.

## CERTIFICATES

**American Life Language Institute** **28/08/2025**
*B2 English Certificate* *Kayseri, Türkiye.*
**Udemy** **22/11/2024**
*(40+ Hours) Python — Beginner to Advanced Programming* *Online.*
**Udemy** **15/05/2025**
*Canva Training: Beginner to Expert* *Online.*
**Udemy** **10/08/2024**
*Learn C# by Developing Applications: A to Z Training* *Online.*
**Udemy** **15/09/2024**
*C# Programming: Beginner to Expert with Visual Studio* *Online.*

## TECHNICAL SKILLS

**Key Skills**: Software Engineering, C#, HTML, CSS, JavaScript, Next.js, Python, Java, PHP, MySQL, MsSQL, OOP, ASP.NET MVC
**Technologies/Frameworks**: Visual Studio Code, Visual Studio, IntelliJ IDEA, PyCharm, Laragon, XAMPP, Arduino IDE, Git, GitHub.
**Further Skill**: Turkish (Native), English (Intermediate B2).

## PROJECTS

**AI & Edge Computing Platform** – OptiGüven Smart OHS Audit System
- Developed an autonomous OHS audit platform using Edge AI and computer vision to analyze IP camera feeds in real-time. Utilized YOLO architectures for PPE compliance, vehicle speed tracking, and pedestrian collision prediction. Designed dynamic geofencing interfaces and spatial risk heatmaps with IoT-integrated physical alert mechanisms.

**Embedded Software & Computer Vision** – Asena UAV Flight System
- Engineered flight control and embedded software for fixed-wing unmanned aerial vehicles. Developed a ”Search for the Red Goal” computer vision algorithm for autonomous target detection and tracking. Optimized low-latency sensor integration and system architecture to ensure mission reliability.

**Embedded Systems Application** – MOGA Electric Vehicle Control Architecture
- Contributed to VCU and BMS software architecture development for electric vehicles. Implemented low-latency communication protocols to support autonomous driving features. Enhanced vehicle reliability through real-time diagnostics, system optimization, and rigorous testing.

**Web Application** – Smart Home Systems Licensing & Management
- Developed a web-based administration panel (HTML/CSS/JS, SQL) for smart home system lifecycle management. Enabled centralized license tracking, remote configuration, and status monitoring for fire detection and security hardware.

**Windows Forms Application** – MQTT File Sender
- Designed a C# desktop application for reliable message transmission using MQTT and JSON protocols. Integrated MySQL for persistent message logging, configuration storage, and delivery tracking.

**Web Application** – BS Reklam E-Commerce Platform
- Built a scalable B2B/B2C e-commerce platform using Node.js, Next.js and PostgreSQL. Implemented role-based pricing, agency discount management, and Iyzico payment gateway integration. Deployed on Linux VDS to ensure high availability and robust performance.
